Course & Section: Result: _____

Activity Title: Building a Simple BMI Calculator

Objective:
Learn how to use HTML, CSS, and JavaScript to create a web-based application that calculates and displays BMI based on user input.

Instructions:

Create three separate files:

- index.html (for the structure of the webpage)
- style.css (for styling the webpage)
- script.js (for the BMI calculation logic)

The output/computation should be displayed as an alert

Ex:
